Discrete Applied Mathematics
Volume 153, Issues 1–3, 1 December 2005

Special Issue:
Typical Case Complexity and Phase Transitions

Guest Editors:
L.M. Kirousis, E. Kranakis

Contents

L.M. Kirousis and E. Kranakis
Editorial 1

Guest Editors 2

A. Beacham and J. Culberson
On the complexity of unfrozen problems 3

P. Beame, J. Culberson, D. Mitchell and C. Moore
The resolution complexity of random graph *k*-colorability 25

N. Creignou, H. Daudé and J. Franco
A sharp threshold for the renameable-Horn and the q-Horn properties 48

T. Dimitriou
SAT distributions with planted assignments and phase transitions between decision and optimization problems 58

A. Faragó
On the typical case complexity of graph optimization 73

J. Franco
Typical case complexity of Satisfiability Algorithms and the threshold phenomenon 89

Y. Gao and J. Culberson
Resolution complexity of random constraint satisfaction problems: Another half of the story 124

doi:10.1016/S0166-218X(05)00328-8

G. Istrate
Threshold properties of random boolean constraint satisfaction problems 141

U. Voll
A novel giant-subgraph phase-transition in sparse random *k*-partite graphs 153

Author index to volume 153 182
